

NEED 2 OF THESE - TOWER (#1)
BLACK BLDG (#3)

Tower #1 - Need to modify door opening where birds fly out.

it will not work the way it is now. Need a carpenter to see what

we have after we get the box done and the machine attached

to the box. May need to be a slider type opening or slide down

then back up when finished.

Upper room over Low House - do not need the opening that is there now.

Carpenter to put a sliding door over it so it can be used in the future if needed.

Just needs to be closed up so birds or other animals do not get in.

5 Stand hut #8 in the outfield

Work that needs to be done before it can be used:

Front side of #8 - Remove door and hinges and other hardware.

Cut opening wider so that double doors go almost all the way across.

You can use the existing door and make another door smaller to fit the opening out of scrap lumber that we have. Need to purchase more hinges. Need to determine if existing latch will work for the double doors. Purchase new if needed.

Doors to be held all the way open by attaching short chains and with hook to the wall and put an eye hook on each door to keep it open. Purchase chains and hooks.

Cut out bottom 2-x 4 at door opening so the cart will roll out easier. (no bump)

Put ramp at the door opening so the cart will roll in and out easily. We can make it out of scrap lumber.

Back side of #8 – Cut out opening in back wall and provide new header and jambs to fit an existing door that is leaning on the side of the hut. Reuse hinges and latch.

5 stand pull out cart
